1.INTRODUCTION

Voyage (Tour Management System) is an online tour booking and travel consultancy platform developed to streamline travel planning and tour management activities. The system provides a centralized platform where agencies, consultants, and customers can interact efficiently for booking tours, managing travel packages, handling refunds, and providing travel guidance.

The platform helps travel agencies manage tour packages, advertisements, consultants, customer reviews, and refund processes. Consultants can assist customers with ticket reservations, visa application procedures, travel insurance, and travel-related support services. Customers can search and filter tour packages, view price details, book tours, contact consultants, provide feedback, and manage cancellations and refunds through the platform.

Voyage aims to improve customer satisfaction by offering convenient online services and better communication between users, while also reducing manual work, saving time, and improving the overall efficiency of travel management operations.

1.1 PURPOSE

The purpose of this Software Requirements Specification (SRS) document is to clearly define and describe the requirements of the Voyage Tour Management System. This document provides a detailed description of the system's features, functions and overall behaviour to ensure proper understanding among developers, designers, testers, and stakeholders.

The main purpose of this SRS is to capture and document both the functional and non-functional requirements of the system. Functional requirements describe the services and operations provided by the system, such as user registration, tour package booking, payment processing, review management, consultant services, and package management. Non-functional requirements define the quality attributes of the system, including security, performance, reliability, usability, and scalability.

This document acts as a reference throughout the software development life cycle and helps ensure that the Voyage Tour Management System is developed according to user needs and business objectives.

1.2 SCOPE

The Voyage Tour Management System is a web-based application developed using a Java full-stack architecture and Angular frontend to simplify and manage tour and travel booking activities for customers, travel agencies, and consultants. The system provides an online platform where users can explore tour packages, make bookings, manage travel-related services, and communicate with travel consultants efficiently.

The main functionalities and features included in the system are:

- ❖ User registration and login for customers, agency, and consultants.
- ❖ Tour package management, including adding, updating, deleting, and viewing tour packages.
- ❖ Online tour booking and reservation facilities.
- ❖ Review, rating, feedback, and complaint management.
- ❖ Refund management for cancelled bookings.
- ❖ Vacancy or availability posting by consultants.
- ❖ Location tracking and travel notes management.
- ❖ Terms and conditions management by the agency admin.
- ❖ Customer profile management and booking history tracking.

The system caters to the following user roles:

1. Customer

- ➡ Register and log in to the system.
- ➡ Search and book tour packages.
- ➡ Provide ratings, reviews, and feedback.
- ➡ View booking history and travel details.

2. Agency Admin

- ➡ Manage tour packages and advertisements.
- ➡ Monitor reviews, complaints, refunds, and feedback.
- ➡ Add consultants and provide login credentials.
- ➡ Manage terms and conditions, incentives, and location tracking.

3. Consultant

- ➡ Assist customers with ticket reservations, visa applications, and travel insurance.
- ➡ Add and manage tour packages.
- ➡ Monitor customer feedback and complaints.
- ➡ Post travel vacancies or availability updates.

1.3 OBJECTIVES

The main objective of the Voyage Tour Management System is to provide an efficient, reliable, and user-friendly platform

for managing tour and travel booking activities online. The system is designed to simplify the interaction between customers, travel agencies, and consultants by automating various travel management processes.

The high-level objectives of the system are:

- ❖ To provide customers with an easy and convenient way to search, view, and book tour packages online.
- ❖ To help travel agencies efficiently manage tour packages, advertisements, customer feedback, complaints, refunds, and consultant activities.
- ❖ To enable consultants to assist customers with ticket reservations, visa processing, travel insurance, and travel-related guidance.
- ❖ To improve communication and coordination between customers, agency admins, and consultants.
- ❖ To maintain proper records of bookings, reviews, ratings, and customer activities.
- ❖ To reduce manual paperwork and administrative workload through automation.
- ❖ To ensure secure and organized management of travel and booking information.
- ❖ To increase customer satisfaction by providing quick access to travel services and support.

2 FUNCTIONAL REQUIREMENTS

2.1 Primary Actors Of the System :-

The primary actors of the Voyage Tour Management System are the users and external entities that interact directly with the system to perform various operations based on their roles and permissions.

1. Customer

- Main users who access the platform to search and book tour packages.
- Activities include registering, logging in, viewing tour packages and travel details, booking tours, making payments, providing ratings, reviews, feedback, and submitting complaints or refund requests.

2. Agency Admin

- Manages and controls the overall operations of the system.
- Responsibilities include managing tour packages and advertisements, monitoring bookings, refunds, reviews, and complaints, adding and managing consultants, managing terms and conditions, tracking locations, maintaining travel notes, and monitoring system activities.

3. Consultant

- Assists customers with travel-related services and support.

2.2 USE CASE DIAGRAMS :-

AGENCY

CONSULTANT

• .

. CUSTOMER

2.3 USER STORIES

AGENCY

AS A	I NEED TO	SO THAT I CAN
AGENCY	Log into the platform	Access admin features and manage operations securely
AGENCY	Add consultants	Assign team members to handle customer requests
AGENCY	Add packages	Offer new travel and tour options to customers
AGENCY	Manage notifications	Send updates and announcements to users
AGENCY	Analyse revenue	Track financial performance and earnings
AGENCY	Analyse customer reviews	Evaluate service quality and user feedback
AGENCY	Access location data	View location-based information for travel operations
AGENCY	Handle refunds and cancellations	Process customer cancellation requests and manage transactions
AGENCY	Manage customized plans	Review and tailor custom travel itineraries for customers
AGENCY	Provide final confirmation	Approve and verify customer bookings
AGENCY	Monitor overall activity	Oversee consultants, users, and overall site performance

CONSULTANT

AS A	I NEED TO	SO THAT I CAN
Consultant	Log into the portal using my credentials.	I can securely access system features and manage my account.
Consultant	Create and add new service packages.	I can offer standardized service options to clients.
Consultant	Build customized plans for clients.	I can address specific client requirements and tailored needs.
Consultant	Verify submitted documents.	I can ensure client compliance and accuracy of records.
Consultant	Use live chat and send reports to the agency.	I can communicate seamlessly and keep agency stakeholders updated.
Consultant	View the facility overview dashboard.	I can monitor facility operational status and resource allocation.
Consultant	Generate client invoices.	I can request payments accurately for provided services.
Consultant	Perform overall user verification.	I can validate user identity and manage access controls.
Consultant	Verify incoming client payments.	I can confirm successful transactions before fulfilling services.
Consultant	Register into the application by entering my details.	Make my data available to agency and use the system capabilities reserved for registered users.

CUSTOMER

AS A	I NEED TO	SO THAT I CAN
CUSTOMER	Register into application	Make the data available to the agency
CUSTOMER	Login	Login and access the application
CUSTOMER	Filter option to filter the specific content	Easily find tour packages matching my preferences
CUSTOMER	View the tour Packages	Compare options and select a suitable tour
CUSTOMER	Add participants	Include family, friends or <u>a group</u> of people in my tour booking
CUSTOMER	Upload documents	Submit required identity or travel papers
CUSTOMER	Book a tour	Reserve my spot for a chosen travel package
CUSTOMER	Make a payment	Securely complete my tour booking transaction

CUSTOMER	Request refund and cancellation	Cancel my booking and claim eligible funds back
CUSTOMER	Use live chat	Contact consultant or agency for enquiries
CUSTOMER	Submit the tour review	Share feedback on my experience
CUSTOMER	View notifications	Stay updated on booking statuses and alerts
CUSTOMER	Add items to wishlist	Save preferred packages to view or book later
CUSTOMER	View history	Track past bookings and transaction activity

2.4 BPMN :-

3. NON-FUNCTIONAL REQUIREMENTS

- ❖ **Performance:** Must respond quickly under normal conditions, handle concurrent users seamlessly, and process searches/bookings efficiently.
- ❖ **Reliability:** Ensures minimal downtime, reliable storage of transactional data, proper recovery from failures, and backup mechanisms.
- ❖ **Security:** Requires secure logins, role-based access control, encrypted passwords, SSL/TLS data transfer protection, and payment gateway integration.

- ❖ Usability: Features a simple, user-friendly, and intuitive interface with clear navigation and error messages.
- ❖ Availability: Accessible continuously except during scheduled maintenance.
- ❖ Scalability: Designed to support future growth in users, packages, and workloads.

4. TECHNICAL REQUIREMENTS

1. HARDWARE REQUIREMENTS

Server Side

- ➡ Processor: AMD Ryzen 5 or higher
- ➡ RAM: Minimum 8 GB
- ➡ Storage: Minimum 500 GB hard disk or SSD
- ➡ Network: Stable internet connection with adequate bandwidth

Client Side

- ➡ Computer, laptop, tablet, or smartphone
- ➡ Minimum 4 GB RAM
- ➡ Stable internet connection
- ➡ Web browser support

2. SOFTWARE REQUIREMENTS

Operating System

- ➡ Windows 10/11

Web Browsers

- ➡ Google Chrome
- ➡ Mozilla Firefox
- ➡ Microsoft Edge

Database Management System

- ➡ MySQL

3. Programming languages

Frontend

- ➡ HTML
- ➡ CSS
- ➡ JAVASCRIPT

Backend

- ➡ Java

4. Frameworks and technologies

- ➡ Bootstrap for responsive user interface
- ➡ Angular for front end development

➡ Java Spring API for communication between frontend and backend systems

5. Compatibility Requirements

➡ The system should support desktop and mobile devices.

➡ The application should function properly across multiple operating systems and web browsers.

6. Security Requirements

➡ SSL/TLS encryption should be used for secure communication.

➡ Passwords should be stored in encrypted format.

➡ Secure authentication and authorization mechanisms should be implemented.

➡ The system should support secure online payment gateway integration.

5. CONCLUSION

The Software Requirements Specification (SRS) document for the Tour Hub Tour Booking System provides a detailed description of the system's objectives, scope, functional requirements, non-functional requirements, technical requirements, user roles, and overall system functionalities. The document clearly explains how the system will support

customers, agency admins, and consultants in managing tour booking and travel-related services efficiently.

It is recommended that the system be developed using secure and scalable technologies with proper testing and maintenance procedures. Future enhancements such as mobile application support, AI-based travel recommendations, real-time GPS tracking, and multilingual support can also be added to improve the overall functionality and user experience of the system.
